## Summary

**Computer Science Engineering student specializing in Financial Computing and Risk Analytics, with practical experience in credit risk analysis, financial data processing, and data-driven problem solving. Passionate about applying analytical and quantitative approaches to support business decision-making and solve complex financial challenges. Seeking opportunities in Data Science, Risk Analytics, Financial Engineering, or Quantitative Finance.**

## Professional Experience

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                   |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| <b>EY, Credit Risk Modeling Intern</b><br>Developed Probability of Default (PD) and Loss Given Default (LGD) models on a portfolio of Retail loans, following the CRISP-DM methodology and Basel II/III regulatory requirements. Covered the full model lifecycle — from exploratory data analysis to deployment — exposing predictions as a FastAPI REST service with an interactive web interface.<br><b>Tools:</b> Python, Scikit-learn, FastAPI, Streamlit, Docker, MLflow, Git                                                                                           | 06/2026 – 08/2026 |
| <b>STB Bank, Credit Risk Analyst Intern</b><br>Contributed to a credit risk analysis and data modeling project aimed at enhancing financial assessment and decision-making. Cleaned and transformed banking datasets, automated the computation of key financial indicators, and conducted statistical analyses to identify significant predictive variables. Integrated multiple data sources into a unified analytical dataset and documented the full data preparation pipeline.<br><b>Tools:</b> Python (Pandas, NumPy), Excel, Statistical Analysis, Feature Engineering | 06/2025 – 07/2025 |
| <b>EXPRESS DISPLAY, IT Support &amp; Asset Management Intern</b><br>Gained hands-on experience with GLPI (IT Asset Management & Help Desk), handling asset inventory, ticket management, system configuration, reporting, and user support. Observed end-to-end recruitment activities including CV screening, interviews, technical assessments, and onboarding.                                                                                                                                                                                                             | 07/2023 – 08/2023 |

## Education

|                                                                                                                                                              |             |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| <b>Engineering Degree in Computer Science Specialization Financial Computing &amp; Engineering</b><br>Ecole Supérieure Privée d'Ingénierie et de Technologie | 2022 – 2027 |
| <b>Baccalaureate in Technical Sciences</b><br>Ibn Rachik High School, Ezzahra                                                                                | 2021 – 2022 |

## Skills

---

### Programming Languages

- Python
- Java
- C#
- JavaScript
- SQL
- PHP

### Backend

- Spring Boot
- Symfony
- REST APIs

### Databases

- MySQL
- PostgreSQL
- MongoDB

### Frontend

- React
- Angular
- HTML

### Machine Learning & Data Science

- Pandas
- NumPy
- Scikit-learn
- XGBoost
- Random Forest

### DevOps & Tools

- GitHub
- Docker
- Kubernetes
- CI/CD
- SonarQube
- Prometheus
- Grafana

## Languages

---

### Arabic

Native

### English

B2

### French

DELF B2

## Certificates

---

- Introduction to Data and Data Science [🔗](#)

## Projects

---

**Ethereum Address Risk Prediction** : [🔗](#) , Machine Learning pipeline developed to classify Ethereum wallet risk using transaction data, focused on detecting fraudulent Ethereum addresses using supervised and unsupervised learning. Combines classification, clustering, anomaly detection, dimensionality reduction, and explainability methods for blockchain security.

### Tech Stack :

Python, Scikit-Learn, Pandas, NumPy, SMOTE, PCA, KMeans, DBSCAN, Matplotlib

**EQUA** [🔗](#) , Decentralized Microfinance Ecosystem. A blockchain-powered microfinance platform promoting financial inclusion through accessible, secure, and low-cost financial services. Combines traditional fiat currency management with tokenized digital assets via a dual-wallet architecture.

**Tech Stack** : Java 21, Spring Boot, PostgreSQL, Docker, Blockchain, REST API, Angular

**CAPM Liquidity** [🔗](#) , US Stock Market Quantitative Analysis. Empirical study of liquidity-adjusted CAPM models on 30 DJIA stocks. Evaluates how liquidity costs and risk influence asset pricing using econometric modeling, panel regressions, and financial data from Yahoo Finance.

**Tech Stack** : R, RStudio, CAPM, Econometrics, Panel Regression, Yahoo Finance, R Markdown

**Repath**, A desktop and web application that supports individuals with addiction through a personalized rehabilitation journey. It integrates medical, psychological, physical, and social support services into a unified platform, centralizing care and follow-up with a shared database.

**Tech Stack** : Symfony, JavaFx , MySql

## Organisations

---

**Founder of the Tunipreneurs Club at ESPRIT**

2025 – 2026

**General Member of the Interact Club: "Least Active Recruit" Certificate**

2021 – 2022
