

NESRINE ROUISSI

Computer Engineering Student — Business Intelligence | Data Science | Artificial Intelligence

Angers, France | +33 07 69 80 46 05 | rouissinesrine3@gmail.com | linkedin.com/in/nesine-rouissi-b19614266 | github.com/nesine26rouissi

PROFILE

Third-year Computer Engineering student (final-year exchange semester at ESEO Angers) specializing in Business Intelligence and Data Science. Hands-on experience across Data Science, Business Intelligence and Artificial Intelligence projects, designing BI solutions and predictive models that turn complex data into actionable insights, with a focus on applying generative AI to Data & BI workflows.

SKILLS

Programming Languages: Python, R, C++, JavaScript, PHP, SQL, HTML/CSS

Business Intelligence & Data: Power BI, DAX, Power Query, ETL, Dimensional Modeling, Heflo

Artificial Intelligence & ML: Deep Learning, Machine Learning, NLP, CRISP-DM, TensorFlow/Keras, Scikit-learn, Medical Image Processing

Databases: Oracle, MongoDB, MySQL, SQL Server

Frameworks & Libraries: Node.js, Symfony, JavaFX, FlutterFlow, FastAPI

Methodologies & Tools: Merise, UML, Statistical Analysis, VS Code, StarUML, Cisco Packet Tracer, Git, SSIS, Claude/MCP, Docker, MLflow, MLOps

Languages: Arabic (Native), French (DELF B2), English (B2)

PROFESSIONAL EXPERIENCE

Data Science Engineering Intern, EY Tunisia (Ernst & Young)

06/2026 – 07/2026

- AI News Presenter Platform (Express FM): designed the architecture of a virtual AI presenter covering news collection, semantic deduplication, categorization, importance scoring, summarization, TV script generation, speech synthesis and animated avatar.
- GenAI Assistant for Data Engineering & BI: built a proof of concept on using generative AI (Claude, MCP) to automate ETL pipelines, SQL scripts, DAX measures and Power Query code; benchmarked manual vs. AI-assisted vs. MCP-assisted development.

Tools: Python, FastAPI, PostgreSQL, SQL Server, SSIS, Power BI, Claude/MCP, LLM

Data / BI Analyst Intern, STB Bank

06/2025 – 07/2025

- Analyzed and optimized predicted cash flows and liquidity across bank branches.
- Built predictive models using real financial and banking data.

Tools: Python, Statistical Analysis, Dimensional Modeling

Intern — Final Year Project, AVAXIA

02/2024 – 05/2024

- Designed and developed a Business Intelligence solution for monitoring SAP systems.
- Implemented dimensional modeling and ETL processes to feed the dashboards.

Tools: Power BI, DAX, Power Query, ETL

Intern, ELITINFO

07/2023

- Introduced to SAGE BI reporting features and configuration.

EDUCATION

Exchange Semester – DISA Specialization, Biomedical Track

09/2026 – 02/2027

ESEO Angers

2nd Year Computer Science Engineering Cycle

2024 – 2026

École Supérieure Privée d'Ingénierie et de Technologie (ESPRIT)

Bachelor's Degree in Business Computing, Business Intelligence Track

2022 – 2024

ESEN, University of Manouba

Baccalaureate in Experimental Sciences

2020 – 2021

Lycée Ibn Rachik, Ezzahra

CERTIFICATIONS

- Applications of AI for Anomaly Detection
- Fundamentals of Deep Learning

PROJECTS

ALIA — AI Avatar for Medical and Pharmaceutical Excellence — Intelligent conversational assistant improving medical representatives' training and their interactions with healthcare professionals.

TB-Detect — Deep learning system for automatic tuberculosis detection on chest X-rays, designed for rapid screening in resource-limited environments.

Breast Cancer Detection — Predictive model following the CRISP-DM methodology; compared several algorithms and deployed a classifier through a simple interface.

Overfitted — AI Mode — Intelligent e-commerce platform combining computer vision, NLP, and generative AI for personalized recommendations, virtual try-on, and content generation.

Hospital Dashboards — Complete Power BI solution for hospital management: snowflake modeling, ETL processes and interactive dashboards tracking KPIs (patient satisfaction, occupancy rate, cost per service).

Student Performance Analysis — Statistical analysis in R identifying key factors and predictive models to detect at-risk students.

HACK EL MAKEN Hackathon — 1st prize — online booking platform for MAKAN site activities (calligraphy, coworking, design lab).

Year-End Integrated Project — Designed an e-commerce website for clothing and accessories.

Alzheimer's Disease Detection — MLOps Pipeline — Contributed to a group MLOps pipeline for Alzheimer's disease classification: experiment tracking and model logging with MLflow, a prediction API built with FastAPI, and local containerization with Docker to test deployment.

EXTRACURRICULAR ACTIVITIES

- ESEN Android Club — Treasurer
- AIESEC University — Member, IR and Data Department; Middle Manager MoGX+TM Specialist_IM (outgoing global volunteer/talent marketing, talent management, information management)
